RDS

IRON/WOOD GRIPS

Patents Pending

## SUPERIOR TACKINESS

The Reverse Dimple™ design is similar to the foot of a gecko. This texture provides enhanced grip traction resulting from the increased surface area available to grasp, without a requirement to increase the size of the grip.

## REDUCES GRIP PRESSURE

Physics states:  $[\text{Pressure} = \text{Force} \div \text{Surface Area}]$ . Reverse dimples increase the surface area in contact with your hands, and instantaneously reduce your grip pressure. Less grip pressure allows more control and consistency in your game.

## ENHANCES TACTILE FEEDBACK

Reverse dimples concentrate and amplify feedback from the club shaft directly to your fingertips for enhanced feel everywhere on the course. Our RD<sup>S</sup> iron and wood grips are a game-changer!

## WICKS MOISTURE

The Reverse Dimple™ texture maintains intimate contact with the hands while the channels between the dimples allow sweat and other moisture to escape.

POLYURETHANE  
GRIPWRAP

Grips consist of a custom rubber underlister wrapped with industry-leading polyurethane material to provide superior comfort and tack.

MAGNETIC  
ENDCAP

If you're worried about the marker coming loose in your bag...don't be! You will be impressed by strength of this custom built magnet. Made of rare-earth neodymium, and triple-plated to resist the elements, these magnets are as good as they get.

BUILT-IN  
BALLMARKER

- Directional arrows assist with alignment
- Always conveniently available on the greens
- UV-resistant epoxy coating prevents fading
- Plated to protect from the elements

PATENTED  
RETAININGWALL

The raised rubber retaining wall ensures your marker is protected and stays in place round after round, always at your fingertips. This wall has been tested over hundreds of rounds for durability to ensure your grip will stay functional for years to come.
